Missed: Est. = missed presentation slots; D+S = Kodi drop + skip. Do not add these overlapping indicators. Red = any missed slot, nonzero D+S or Fail; no highlight otherwise.

FPS*: HDMI/KMS presentations per second, not unique movie frames. GUI redraws or repeated film frames can hide additional losses. D+S is a counter sum, not a deduplicated frame count.

Headroom: submission-deadline reserve including async queue lead, not spare GPU time. GPU = render engine. n/a = incomplete fences. Fail = requested mode not retained; Output is the requested target.

Settings: GUI closed; async ON; zoom 100%; identical light probes; target 2300 nits. FEL: VAAPI (GPU bilinear if unavailable); Master: Reference GPU. Gemini reports MEL. No HDR10+ TV is available to qualify native/converted HDR10+ output.
