**Missed:** Est. = missed presentation slots; D+S = Kodi drop + skip. Do not add these overlapping indicators. Red = any missed slot, nonzero D+S or Fail; no highlight otherwise.

**FPS*:** HDMI/KMS presentations per second, not unique movie frames. GUI redraws or repeated film frames can hide additional losses. D+S is a counter sum, not a deduplicated frame count.

**Headroom:** cadence-deadline reserve including async queue lead, not spare GPU time. GPU = render engine. n/a = incomplete fences. Fail = requested mode not retained; Output is the requested target.

**Settings:** async ON; debug logs OFF; active FEL uses GPU bilinear outside Master Reference, which retains Reference GPU (including IPT). Gemini Man reports MEL.
